

The file “correctness_check.py” is the program to check the correctness of the results.

Code instructions:

To run the code smoothly, please set the paths in the file “correctness_check.py” as described below.

```
251      # Absolute path of results
252      result_paths = ["/Users/Documents/Daily/2021.0193/MIP/results/P set/28800s",
253                      "/Users/Documents/Daily/2021.0193/MIP/results/SD set/k=2/28800s"]
254      # Absolute path of instances
255      data_paths = ["/Users/Documents/Daily/2021.0193/data/P set",
256                   "/Users/Documents/Daily/2021.0193/data/SD set/k=2"]
```

The “data_paths” is the absolute path list of data instance folders, and the “result_paths” is the absolute path list of corresponding result folders.
