The file "check_program.py" is the program to check the correctness of the results.

Code instructions:

To run the code smoothly, please set the paths in the file "check_program.py" as described below.

```
200        # Absolute path of results
201        result_paths = ["/Users/Documents/Daily/2021.0193/APPX/results/P set",
202                        "/Users/Documents/Daily/2021.0193/APPX/results/SD set/k=2"]
203        # Absolute path of instances
204        data_paths = ["/Users/Documents/Daily/2021.0193/data/P set",
205                      "/Users/Documents/Daily/2021.0193/data/SD set/k=2"]
```

The "data_paths" is the absolute path list of data instance folders, and the "result_paths" is the absolute path list of corresponding result folders.
